Question No. 1

You are developing an application that allows users to find musicians that are looking for work. The application must store information about musicians, the instruments that they play, and other related data.

The application must also allow users to determine which musicians have played together, including groups of three or more musicians that have performed together at a specific location.

Which Azure Cosmos DB API should you use for the application?

- A. Core
- B. MongoDB
- C. Cassandra
- D. Gremlin

Answer: B

Question No. 2

You deploy an API to API Management

You must secure all operations on the API by using a client certificate.

You need to secure access to the backend service of the API by using client certificates.

Which two security features can you use?

- A. Azure AD token
- B. Self-signed certificate
- C. Certificate Authority (CA) certificate
- D. Triple DES (3DES) cipher
- E. Subscription key

Answer: B, C

Question No. 3

You have an Azure Cosmos DB instance that uses the Strong consistency level and 10,000 Request Units (RUs) per container. <3e>o-replication is enabled.

The instance stores restaurant information including location, menu items, and staff. You currently store information for 1,000 restaurant locations, 500 menu items, and 10,000 staff members. You select the location id as the partition key.

How many logical partitions will be created for the container?

- A. 500
- B. 1,100
- C. 10,000
- D. 10,000,000

Answer: C

Question No. 4

You are designing a small app that will receive web requests containing encoded geographic coordinates. Calls to the app will occur infrequently.

Which compute solution should you recommend?

- **A.** Azure Functions
- **B.** Azure App Service
- **C.** Azure Batch
- **D.** Azure API Management

Answer: B

Question No. 5

Your company has several containers based on the following operating systems:

- * Windows Server 2019 Nano Server
- * Windows Server 2019 Server Core
- * Windows Server 2022 Nano Server
- * Windows Server 2022 Server Core
- * Linux

You plan to migrate the containers to an Azure Kubernetes cluster. What is the minimum number of node pools that the cluster must have?

- **A.** 1
- **B.** 2
- **C.** 3
- **D.** 6

Answer: C
